HIGH PERFORMANCE FLOORING

FIRE-SAFETY AND LOW-NOISE ON BOARD

## HERCULAN HAS GOT IT COVERED

Herculan is a company with a rich history. Active worldwide for almost 85 years and highly specialized in ship floors that can withstand the elements. Over the years, the product range has been professionalized and optimally aligned with the demands of modern shipping. The applied combination of the best sub- and top floors is unique in the market.

NOISE REDUCTION

FIREPROOF

## RECOGNISABLE QUALITY AT A HIGH LEVEL

### FIRE-RETARDANT FLOORS FROM 900 TO 3000 KG/M<sup>3</sup>

Especially for the high-demanding market, Herculan has developed a floor line that is unique in its class. Herculan offers a product range of certified floors that can be applied in the most critical locations on board.

### INNOVATIVE

In a competitive market a company must innovate to serve its customers in the best possible manner. Herculan is always creating new possibilities to increase quality levels and reduce installation times. One of the results is the in-house developed installation robot for cement mortar floors. This

robot not only makes the installation faster, the laser control system also ensures a perfect flatness of the floor. This result cannot be achieved by human hands.

### NOISE REDUCTION

Apart from fire-resistant floors, Herculan has also gained a lot of expertise in sound-insulating floor systems. Also in this case, our own development has resulted in practical applications in which synthetic-bonded floating floors make all the difference. Thanks to software developed in-house, Herculan is able to calculate the frequency of the floor to determine the correct floor system. These floors insulate the noise and make working and staying on board a lot more comfortable.
