

Top coat

Broadcasting material

Broadcasting layer

- **SEAMLESS**
- **SOLVENT-FREE**
- **GOOD MECHANICAL PROPERTIES**
- **HIGHLY WEAR-RESISTANT & LOW-MAINTENANCE**
- **EASY TO CLEAN**
- **GOOD SCRATCH RESISTANCE**
- **SHORT INSTALLATION TIME**

**TAKES
JUST
2 DAYS TO
INSTALL**

The FC 600 series includes Herculán's epoxy filler coat systems. The systems within the FC 600 series consist of solvent-free epoxies and provide a seamless, liquidproof floor finish that is very strong, durable and impact-resistant. These systems are built up with a layer of Herculán epoxy filler coat, which is then completely covered in a mix of flakes, a mix of colored sand or

another natural filler material. A mix of flakes or colored sand is always followed by a transparent topcoat to seal the material in. When choosing non-colored sand, a topcoat is optional and may be given a color. Because of this build up, the systems can be installed in 2 days, which is a major advantage for (renovation) projects where time is a very important factor.
