Maintenance

- Use the cleaning products recommended by Herculán, Herculán Cleaner, Herculán Stripper and Herculán Resin Remover, to extend the service life of your sports floor.
- Immediately remove any spilled products that may damage the floor.
- Regularly removing any sand, dust and other dirt has a positive effect on the life span of your Herculán floor and reduces the risk of scratching.
- The use of a high-quality dust mat limits the spreading of sand and dust over the floor.

Incorrect maintenance

- Do not use any corrosive products for persistent stains; these may severely damage your floor.
- Do not use any abrasives or cleaning products that may damage the top layer of your sports floor.
- Do not use any cloths impregnated with oil. These leave a residue behind on the floor, making it slippery. This residue also attracts dirt and retains it.

Points of attention

- Avoid damaging your sports floor in case of multifunctional use by using a cover system.
- Covering areas of severe mechanical damage with tape prevents further damage. During cleaning work, water will not be able to get underneath the floor.
- Avoid sliding heavy objects along the floor.
- Avoid the use of rubber items on the floor. These may contain softeners, which result in discoloration and could even damage your sports floor.
- Make sure that your shoes are clean.
- Wearing trainers with black soles increases the risk of creating stripes that are hard to remove.
- Avoid smoking, open fires, eating and glassware.
- For the permanent enjoyment of your sports floor, take out a (periodic) maintenance contract.
- An annual full service keeps your sports floor in perfect condition.
